# COVID 19 EMERGENCY RESPONSE GUIDENCE FOR RESUSCITATION & EMERGENCY CARE (Healthcare Environment)

## For confirmed or suspected COVID 19 positive patients

#### At least level 2 PPE

Disposable Gloves, Apron, Fluid Resistant Surgical Mask & Eye protection

### **Check For Danger**

If not already apply at least level 2 PPE where available – Gloves, surgical mask and apron

## Confirm Cardiac Arrest- Look for absence of signs of life from a distance

Do not place your cheek next to the patients mouth/nose to check for breathing

# Call for Help 999/112 & Emergency Equipment and allocate a gate keeper

State suspected Covid 19 Patient
Only take equipment into patient area that is required

#### **AGP PPE**

As above but In addition Disposable Gown & Filtering Face Mask FFP3

**Prior to Chest Compressions** 

Do Not Start Chest Compression unless in AGP PPE - (in children 5 initial breaths with BVM)

## Place AED on patient and follow prompts

If oxygen mask on patients face – leave in situ- but turn off oxygen flow Place cloth or mask on patients face if BVM not readily available

**STOP THINK!- Chest Compression is considered to be an AGP procedure**Appropriate level PPE should be donned prior to comencing Chest Compression & Ventilation

Other staff should apply appropriate level PPE
Ventilation should be performed with Bag Valve Mask or Supraglottic airway device -**Do not use pocket mask or face shield** 

Ensure all equipment & PPE is removed & decontaminated / disposed of correctly
